

6. Upload Actions

The following API group provides a possibility to upload files.

There are two types of uploads: multipart and chunked.

Multipart upload uses a standard HTTP content type format of multipart/form-data.

Chunked uploads are performed using 'Range' headers. The chunked upload requires explicit [finalize](#) action.

The response of file content POST call contains ID of the uploaded file.

	Multipart	Chunked
Upload format	multipart/form-data	binary, with Range HTTP headers
Max file size	2 GB	Virtually unlimited (max chunk size is 2 GB)
Finalization	Not needed	Required

- [Finalize upload](#)
- [Get upload link](#)
- [Upload action](#)
