

# filecmdMkdir

Creates folder with specified name.

## Parameters

Name	Type	Description
<b>name</b> required	string	new folder name
<b>parent</b> required	string	parent folder id
<b>cb</b> optional	function	callback function

## Example

```
this.filecmdMkdir = function(name, parent, cb) {  
  return _request({  
    method: 'POST',  
    data: {  
      'name': name,  
      'target': parent  
    },  
    url: '/file/mkdir',  
    callback: cb  
  });  
};
```
