

# updateAccountProfile

Changes personal profile data. Check "data" example below.

## Parameters

| Name                    | Type     | Description       |
|-------------------------|----------|-------------------|
| <b>data</b><br>required | object   | new metadata      |
| <b>cb</b><br>optional   | function | callback function |

## Example

```
this.updateAccountProfile = function (data, cb) {  
  if(data.password)  
    data.password = _cryptString(data.password);  
  return _request( {  
    method: 'POST',  
    url: '/profile/set',  
    data: data,  
    callback: cb  
  });  
};
```

## Example Result

```
{  
  email: "john@smith.net",  
  language: "",  
  password: "BldVCwcU", // crypted password  
  realname: "john"  
}
```
