

userCreate

Creates user with specified parameters. Check "data" example below.

Parameters

| Name | Type | Description |
|-------------------------|----------|-------------------|
| data required | object | new user metadata |
| cb optional | function | callback function |

Example

```
this.userCreate = function(data, cb) {  
  if(data.password)  
    data.password = _cryptString(data.password);  
  return _request( {  
    method: 'POST',  
    url: '/user/create/',  
    data: data,  
    callback: cb/*,  
    silent: true*/  
  });  
};
```

Example Result

```
{  
  email: "john@smith.io"  
  expires: 0  
  groups: []  
  home_operations: 191  
  language: "en_GB"  
  parent: "12345678-1234-1234-1234-123456789098"  
  realname: "john smith"  
  status: "A"  
  super_admin: "N"  
  user_operations: 3  
  users: []  
}
```
