

instantShareAction

Shares files to specified user.

Parameters

Name	Type	Description
id required	string	instantShare id
data required	object	action data. Pattern in example
cb optional	function	callback function

Example

```
this.instantShareAction = function(id, data, cb) {  
  if(data.password)  
    data.password = _cryptString(data.password);  
  return _request({  
    method: 'POST',  
    url: '/is/share/'+id,  
    data: data,  
    callback: cb  
  });  
};
```

Example Result

```
{  
  contacts: ["12345678-1234-1234-1234-123456789098", "12345678-1234-1234-1234-123456789098"], // id of each  
  recipient  
  files: ["12345678-1234-1234-1234-123456789098", "12345678-1234-1234-1234-123456789098"], // id of each  
  uploaded file  
  folder: "12345678-1234-1234-1234-123456789098", // id of folder where uploaded files placed  
  subject: "example of a good written subject",  
  message: "example of a good written message",  
  expires: 0,  
  activates: 0,  
  password_protected: true,  
  password: "magicword",  
  separate_password: opt.separate_password || false, // send password in separate email  
  return_files: opt.return_files || false, // send request-file page
