

sendRequest

Sends generated request-files link to specified user. Check "data" example below.

Parameters

Name	Type	Description
id required	string	specified user/contact id
data optional	object	metadata for request-files page
cb optional	function	callback function

Example

```
this.sendRequest = function (id, data, cb) {  
  return _request({  
    method : 'POST',  
    url : '/contact/send_request/'+id,  
    data: data,  
    callback : cb  
  });  
};
```

Example Result

```
{  
  message: "some message"  
}
```
