Quatrix API

Quatrix API helps you add secure file sharing capabilities to your apps. Using our API you can share and receive files, store and track your files on the Quatrix cloud, manage your users and contacts, adjust your account and profile settings as well as cover billing for the account. Learn more how to use the API to perform all of these operations in API Reference.
Quatrix API Explorer page displays all available resources with APIs and lets you explore the API with your own data.
API Guides contain the series of guides that explain how to use Quatrix API to perform many different types of functions.

○ **Create quick links**

○ **Share files**

○ **Share PGP encrypted files**

○ **Get account info (metadata, users, logo, account usage)**

○ **Retrieve and modify files/folders**
